

Differential Pressure Transmitters

Clog-resistant pressure transmitters for use in particulate heavy industrial applications

- ✓ Heavy Ceramic Diaphragm
- ✓ Wide Range of Different Pressure Ranges
- ✓ Reduced Maintenance
- ✓ Rugged Construction
- ✓ Easy quick clamp mounting
- ✓ 2-wire loop power, 4-20mA
- ✓ All 316L stainless steel body

The DP 20T (differential pressure) transmitters are designed for monitoring filters and duct ventilation applications in particulate laden processes. They prevent clogging that commonly occurs with gauges and transmitters that typically use small tube taps. A rugged ceramic sensing element provides accurate measurements below 10" WC.

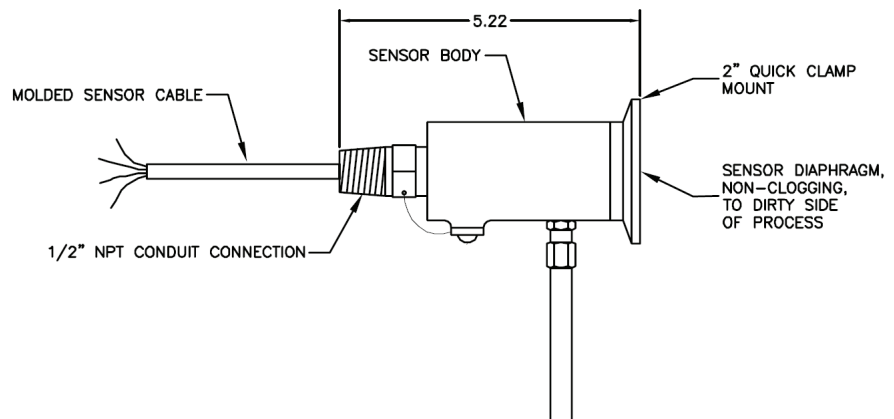

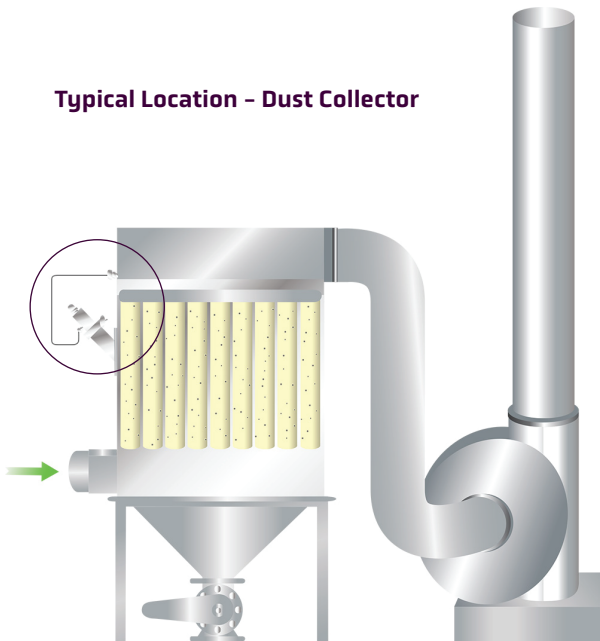

Commonly Ordered with

Auburn B-PAC Filter Control Systems

Typical Location - Dust Collector
